

BillingPro

Getting Started Guide — simple steps in order

Point of Sale & billing · Infinexen Technologies · 2026

Use this checklist when setting up a shop and training staff.

0. Start the application

- Windows: double-click START_BILLINGPRO.bat (or run python run.py).
- Open <http://localhost:8003> in a browser.
- Default logins — Super Admin: superadmin / superadmin123; Store Admin: admin / admin123; Cashier: cashier / cashier123.
- Change these passwords before real use.

1. Super Admin — shop & features

- Shops / branches — add the store (name, code, address).
- Features & admin — enable only the modules that shop paid for.
- Create store admin — username/password for the shop owner/manager.

2. Store Admin — setup (strict order)

- Settings — shop branding, default GST %, bill messages, theme.
- Counters — create billing counters (Counter 1, Counter 2, ...).
- Employees — add cashiers; assign each to a counter.
- Assign pages — tick which screens each user may open, then Save (menu updates on next click).
- Suppliers — add vendors you purchase from.
- Products — add catalogue (single form or Excel/CSV upload); set MRP, cost, GST, stock.
- Purchases / GRN — receive goods: choose supplier, product, qty, purchase rate (stock increases).
- Supplier templates (optional) — save recurring lists; download Excel sample; upload; Receive into stock.
- Stock — check quantities; adjust only when needed.
- Warehouses / Batches (optional) — if those features are enabled.
- Loyalty / Coupons (optional) — customer rewards and promos.
- Barcode labels — print from Products when ready to tag shelves.

3. Daily billing (cashier)

- New Bill — search or scan SKU → add lines → take payment (cash / card / UPI / split).
- Held bills — pause a bill and recall later.
- Bills — find, view, reprint, or edit (if allowed).
- Returns — process returns / credit notes.
- Credit (Udhaar) — credit sales and collections.
- Day close — close the counter day and record cash.

4. Reports & tax

- Dashboard / Reports — sales and profit overview.
- Shifts — sales by counter / staff.

- GST export — download CSV for tax filing.
- Audit log — track important changes.
- Reorder — products below reorder level.

5. Menu layout (left sidebar)

- Overview — Dashboard, Reports, Shifts, Day close.
- Billing — New Bill, Holds, Bills, Returns, Credit.
- Inventory — Suppliers → Products → Purchases → Templates → Stock → Reorder → Warehouses → Batches.
- Customers — Loyalty, Coupons.
- Reports & tax — GST export, Audit.
- Administration — Settings, Counters, Employees, Assign pages, Shops, Offline.
- Help — on-screen guide and this PDF.

6. Quick tips

- If a menu item is missing: Super Admin must enable the feature for the shop, and Store Admin must Assign pages for that user.
- Stock should normally increase via Purchases (GRN), not only by editing product stock.
- Profit = sale ex-GST – purchase cost; GST collected is tracked separately.
- Languages: English / Tamil / Hindi from the top bar.
